

Three-way LLM trajectory comparison: 30gen (FALLBACK init) vs 30gen smoke (FALLBACK init) vs 100gen (real LLM init)
 Note: M3 / 30gen smoke both FALLBACK init -> single-basin convergence (~1.0). 100gen real LLM init -> multi-basin dynamics.

Gen 0-30: All three LLM runs (init phase)

100gen thinking-off: full trajectory (real LLM init)
